**Global Life Technologies, Makers of NOZIN, Awarded NIH Grant  
for Respiratory Research.**

***- Company collaboration with Johns Hopkins University leads to advanced  
research in respiratory disease medicine -***

**Washington, DC (October 6, 2008)** -- Global Life Technologies Corporation (GLT), a privately held biopharmaceutical company with technologies addressing the \$6.5 billion cough, cold, allergy market under the NOZIN® brand, has received Small Business Innovative Research (SBIR) funding from the National Institutes of Health (NIH). Awarded through a highly competitive peer-reviewed process, this NIH grant was based on a thorough evaluation of data acquired by GLT working with leading researchers in the field of respiratory health. Funds from this NIH grant will also be used to support respiratory therapy research with the Johns Hopkins Bloomberg School of Public Health.

The NIH award is for research into developing novel antioxidant therapies for use in prevention and treatment of respiratory diseases. This work will be performed in collaboration with Professor Ernst Wm. Spannake PhD of Johns Hopkins University.

Professor Spannake commented, "I am very pleased to be involved in this research that supports development of new approaches to protecting the health of the respiratory system. The practice of public health is based on prevention and GLT's work to develop scientifically-valid interventions to reduce health risk in this important area is exciting."

Philippe Touret, Chairman and CEO of GLT, stated "The NIH SBIR funding is a critical validation of GLT's technology platform and it will enable GLT to accelerate its research timeline. Principal Investigator for the project and GLT's Chief Science Officer, John A. Willimann, has done a remarkable job developing this technology. I am personally thrilled that the NIH has recognized our research in respiratory therapy to address a market need for advancing personal protection from environmental risks."

About Global Life Technologies, Corp.

Global Life Technologies Corp. (GLT) is a privately held biopharmaceutical company with a goal to enhance life through innovative technologies and proprietary products directed at the growing health maintenance and disease prevention market. GLT's products under the NOZIN® brand include NOZIN® Nasal Sanitizer® solution. The NOZIN® "Healthy nose, Healthy life™" philosophy underlies the company's natural, science-backed products that support respiratory health and wellness.
